

East Montpelier Hazard Mitigation Survey

Hazard mitigation is the effort to reduce loss of life and property by lessening the impact of disasters. Communities engage in hazard mitigation planning to identify risks and vulnerabilities associated with natural disasters, and develop long-term strategies for protecting people and property from future hazard events. Mitigation plans are key to breaking the cycle of disaster damage, reconstruction, and repeated damage.

Muddy Brook, East Montpelier, VT

The Town of East Montpelier, in collaboration with Central Vermont Regional Planning Commission, has begun the hazard mitigation planning process and is looking for input from East Montpelier residents to help identify the hazards that impact the town. Feedback from members of the community is highly desired and all are encouraged to participate. A SurveyMonkey survey was created to allow the survey to be taken on a computer or mobile device. The following link can be entered into a web browser or the QR Code can be scanned using a smart phone. If you have any questions about the hazard mitigation planning process, please contact Jonathan DeLaBruere, CVRPC Emergency Management Planner, at delabruere@cvregion.com.
