

**Email to the EM Recreation Board's Paul Winters from Catamount Solar's Chris Sparadeo:**

Hi Paul,

Nice speaking with you today. Just to outline our conversation:

-Montpelier Rec Field is looking to electrify a 12'x24' shed for use of small appliances and pitching machines in the spring and summer months.

- The limited roof space on the shed would either require additional ground mounted solar or a maintenance personnel to occasionally charge the battery bank with an auxiliary portable generator when needed.

- Back of the napkin estimate on cost of system is around \$20 - \$25K. Driving cost in system is batteries.

- Would suggest connecting to the utility and net metering to offset shed consumption OR having solar net metering credits donated from WEC customer with excess credits to the Rec Field.

Thanks again for reaching out and thinking of Catamount Solar.

Kind regards,

Chris
